

Sri Venkata Krishna Sourav V

AI & Backend Developer | Python – Django Rest Framework – AI/ML – AWS
Vijayawada | +91 9063183455 | krishnavitap@gmail.com | github | LinkedIn

Professional Summary

Backend and AI developer who builds web apps and machine learning tools that solve real problems. Comfortable with Python, Django REST APIs, and AI/ML, plus hands-on work with AWS and live production systems.

Experience

R&D Intern – Ninestars Information Technologies

Jan 2026 – Present

- Developed and maintained 120+ REST APIs supporting AI-driven OCR workflows and document processing systems.
- Improved average API response time to 120ms by optimizing queries, caching strategies, and request handling.
- Created backend pipelines for OCR processing, handling document ingestion, parsing, and structured data extraction.
- Worked on integrating AI models into backend services, enabling automated data extraction and validation.

Skills

Languages & Databases: Python, Java, SQL, MySQL, Postgres

Backend, Web & Cloud: Django, Django REST Framework, React, Docker, Kubernetes, AWS, Git, GitHub

AI, ML & Data: TensorFlow, Keras, Scikit-learn, LangChain, Librosa, NumPy, Pandas, RAG, LLMs, Vector Databases, Deep Learning, Power BI

Personal Projects

Git Repo Summarizer – RAG-based Code Q&A

Code

Python, LangChain, LLMs, Vector Database, React

- Made a full-stack app that reads a full code repository and answers questions about it in plain language.
- Split repo files into 1,000+ text chunks and stored them in a vector database for fast, relevant search.
- Pulled the top matching code pieces and passed them to an LLM, cutting answer time to under 5 seconds per question.
- Designed a simple React web page so users can paste a repo link and start asking questions in 2 clicks.

Speech Emotion Recognition – Deep Learning

Code

Python, PyTorch, Librosa, CNN, Mel-Spectrograms

- Trained a deep learning model to read human emotion from speech using a labelled audio dataset of 1,400+ clips.
- Processed the audio and turned each clip into a mel-spectrogram image to feed the model.
- Used a CNN to sort speech into 7 emotion types (happy, sad, angry, and more) from the spectrogram images.
- Reached around 80% test accuracy by tuning the model and balancing the training data.

Chocolate Exports Analytics – Power BI

Code

Power BI, Data Cleaning, Data Visualization

- Cleaned a raw chocolate-exports dataset of 1,000+ rows, fixing missing values and wrong entries.
- Set up 3 Power BI dashboards showing sales, top markets, and export trends over time.
- Linked charts and filters so users can view results by country, year, and product in one click.
- Turned the data into clear points that show which markets and months sell the most.

PaperRepo – Academic Paper Repository

Code

Django REST Framework, React, Supabase, JWT Auth

- Launched a full-stack site where students upload, read, and download question papers, important questions, and study notes.
- Wrote full login and signup with cookie-based JWT, keeping each user's access and uploads secure across 10+ API routes.
- Enabled search and filters by subject and semester, helping users find the right paper in under 3 clicks.
- Organized study material into clear subject and semester groups, making 100+ files easy to browse.

Certifications

AWS Certified Solutions Architect – Associate
Oracle GenAI Foundations

PCEP – Python Entry-Level Programmer
Postman API Fundamentals

Education

VIT-AP, Amaravati – B.Tech in Computer Science with Specialization in AI & ML

2022–Present

CGPA: 8.21/10.00

Sri Chaitanya Jr. College, Vijayawada – Intermediate (APSEB)

2020–2022

Score: 87.9%

BVB SVV, Tirupati – CBSE 10th

2011–2020

Score: 89.2%
